Often filled with jargon, abbreviations, and directions requiring an understanding of doctoral degrees, software user manuals are sometimes written from the developer's point of view, not the user's point of view. As a result, management can make assumptions about the level of skill of the reader, which are often incorrect. The first step in writing a good user guide is to get the actual writing process as far away from the engineers as possible. A software developer knows more than anyone what makes the software work, but that doesn't mean the developer has to write a guide. On the contrary, it is a clear disadvantage. More important than a deep understanding of the inner workings of the software is understanding who the end user will be, what his educational level is, and how that end user will use the software. In most cases, end users don't need to know the intricacies of programming and back-end software work - they just need to know how to use it to make their work easier. The user's manual should be largely task-oriented, not highly descriptive. Since the guide is written to help users understand how to perform specific tasks, the author must have an understanding of these tasks as well, and as a result, going through every discrete step of each function is absolutely necessary. It is not necessary for a writer to necessarily know how the program was created in terms of design or development, but it is important to have a strong working knowledge of all its features. In every task, write each step, including clicks, menus, and other activities. While the developer should not be the one who writes the guide, it will still be a valuable resource for the writer, and before recording, the start plan is between the writer, developer and engineers, and potential end users to help inform the writer's work from the start. Interviews with subject experts and engineers should be recorded, and transcripts should be made for later reference. The user's manual should not be too textual. Rather, include the liberal use of graphics and video clips. The description of the action is much clearer with text directions accompanied by a video clip that clearly illustrates this direction. Turn on both before and after viewings to show what the screen looks like before each action and what happens after the action has been taken. A simple screen capture tool, such as the snipping tool included in Microsoft Windows, works well to capture these images. Be sure to pro the number of each image, and include a caption that briefly describes it. Its center is directly under the paragraph, which for the first time introduces the concept depicted in the image. Clear communication in a technical document requires planning and compliance with standards throughout the manual. Standards in both view and language and item help avoid confusion. Patterns are available and can be good good points for uniformity, although they can certainly be adapted to each situation. Using a single-inch margin with a single column is best suited to the need to add graphics; setting up two columns may seem too crowded and can make posting images confusing. More than any other type of document, the software user manual is likely to go through several iterations before it is completed, and it will probably go through the process of being reviewed by several stakeholders. Using the Track Change feature in Microsoft Word is an easy way to track comments and changes for each person. Creating multiple versions after each review cycle, each with a different file name, also helps the process and ensures that all stakeholders are satisfied with the final result. James Clark Sennheiser produces a line of wireless headphones that work with the transmitter to send beeps from almost any device with a 1/4-inch or 3.5mm audio outlet socket, including a TV. Headphones are rated in a roaming range of up to 100 meters, so you can enjoy TV audio indoors or outdoors. If you have a problem, try troubleshooting in the Sennheiser block before you can go to the repair center for help. Tap two forks at each end of the stereo cable firmly into the sockets on the back of the Sennheiser transmitter and audio outputs at the back of the TV. This provides a good signal connection. Connect the power cord to the transmitter to confirm that the device is receiving electricity. Turn the right earpiece on Sennheiser headphones counterclockwise to remove the lid and expose the battery compartment. Place two AAA batteries in the headphone compartment and replace the lid. Slide the ON/OFF switch along the edge of the headphones to the ON position. Move closer to your TV and Sennheiser to make sure the headphones are within range. Click the Menu button on the TV remote to access the audio selection and check the set is not installed on Mute using the up and down or left and right arrow keys to turn off the mute function. Press the volume button on the TV or remote control, as the headphones will not produce sound if the volume of the source component is set at zero. Don't forget: your package has two parts. You already go through great lengths to protect one (your penis) but sometimes neglect the second (nuts). If you want to provide healthy sperm and a vibrant sex life, start showing your testicles some TLC. stat. Here's how. KEEP THEM COOLA laptop on your lap raises the temperature of your balls, which can harm sperm quality, fertility and sterility research found. Install devices on the table, says MH Counselor Larry Lipshultz, M.D. HIT SACKLess Sleep means more stress hormones that can juice sperm production, said Tobias Kohler, M.D., M.P.H., F.A.C.S., an associate professor of urology at the University of Southern Illinois. EYE THEIR SIEOLDER men with an egg volume of 20 milliliters or more risk of heart problems, journal sexual research reports. The authors say that damage to blood vessels can up to the size of the Yaites. GET A SAFE SNIPA vasectomy will not cause ED, a new study published in the Journal of Sexual Medicine has found. That is, if you don't have sex for 72 hours. Possible pain or bleeding can leave you limping. MOVE YOUR PHONENumerous research has linked mobile phone exposure to reduced sperm count and quality. So keep the phone in your back pocket, not in the front, says Dr Lipshultz. KILL SPIDERSDilated veins in the scrotum, which are similar to spider veins, can cause infertility and shrinkage of the testicles, says Dr Kohler. Having planned a meeting with a urologist. You don't expect headphone software to seriously impair the security of your computer, but that's exactly what Sennheiser has managed to do. The desktop app for its headsets, called HeadSetup and HeadSetup Pro, included a botched root certificate that allows anyone who knows about the defect to impersonate websites without detection. Sennheiser has released a patch for the software, but it doesn't seem to understand the seriousness of the screw. The software, which works on both Windows computers and Apple computers, is designed to help the company's headset and speakers connect and use their devices. It does this, but it also includes a root certificate with an open private key. Once installed, the system will trust the website with the appropriate certificate, as Sennheiser keeps the certificate in the operating system certificate store. With this certificate installed, it is trivially easy for an attacker to create a phishing site that looks like the real deal. As long as it uses a leaked private key from the Sennheiser program, your browser will report on a legitimate website with HTTPS. The only way to say something is wrong is to check the HTTPS certificate code, but virtually no one does it. As a last resort, people are looking for a lock in the address panel, which means nothing in this case. Research firm Secorvo, which discovered the flaw, has proven its point, built a fake Google website that looks legitimate for a compromised system. Secorvo is a fake Google example. Perhaps the worst aspect of the Sennheiser error is that not installing HeadSetup will not fix the vulnerability. Even after cleaning up all the software, the certificate remains valid and valid. The company has released a patch that replaces this certificate with one that does not leak its key, but there is no way to get people to update or even make sure they know there is a problem. The downside was compared to the Lenovo Superfish bug that affected the PC back in 2015. Superfish was a sketchy advertising program bundled on Lenovo PCs, and Sennheiser HeadSetup, it contained a flawed root certificate that allowed third parties to forge websites. This was perhaps worse because the bug was pre-loaded on the new PC. There will be fewer systems affected by the Sennheiser vulnerability, but the risk is very much the same for those with bugged software. Lenovo was eventually fined \$3.5 million by the FTC for Superfish. Sennheiser might want to start putting some cash aside.
